MATH

$$j > = - \quad \text{AND} \quad j < = +.$$

$$j > = + \quad \text{AND} \quad j < = -$$

"-" Because values were decreasing in the chart above.

"+" Because values were increasing in the chart above.

$\therefore [j > = \text{constant} - i \quad \text{AND} \quad j < = \text{constant} + i]$ for the top.
star matrix

Also $[j > = \text{constant} + i \quad \text{AND} \quad j < = \text{constant} - i]$ for the
below star matrix.

Hence

$[j > = 5 - i \quad \text{AND} \quad j < = 3 + i]$ for any value of
'i' in $[i = 1, 2, 3, 4]$ from step 4

AND

$[j > = 1 + i \quad \text{AND} \quad j < = 7 - i]$ for value of 'i'
in $[i = 1, 2, 3]$ from step 4.

```
# for i in range(1, 5):      # This line will printnew line.
    for j in range(1, 8):    # This will print star pattern
                              # & space.
        if j > = 5 - i AND j < = 3 + i: # Calculated earlier.
            print("*", end = " ")
        else:
